

SERVICES

AI is here. Quantum is coming.

ArcQubit helps enterprises, governments, and investors assess risk, innovate, and transition capabilities **from research to operations**. Start with PQC migration and compliance, or scale toward AI and quantum for your business case.

- FROM RESEARCH TO OPERATIONS

ArcQubit

BRIDGE TO UTILITY

We hand you a **bridge**

Most firms sell a forecast. We combine three things almost nobody brings together, and our advice runs on the same tools we ship, proven against hard evidence.

Secure by Design

Solutions hardened from the first decision, not bolted on after. Security is the starting point, not a patch.

Accelerated PQC Migration

A faster path off quantum-vulnerable cryptography, scoped to your stack and your deadlines, not a generic checklist.

AI & Quantum Analytics

Next-generation, quantum-enabled analytics that turn the frontier into decisions your business can act on today.

Six ways to work with us

Organized by how deep into delivery you want to go, from a two-week diagnostic to a multi-year program.

1

Implementation & Delivery

Build it and run it. Readiness assessments, QuantumDrift, QuCode in your pipeline, and multi-year PQC programs. Where strategy becomes a running system.

2

Diagnostics & Assessment

Fast, low-commitment entry. A two-week Risk Snapshot, PQC Discovery Sprint, or Readiness Score with full rationale and a clear next step.

3

Executive & Board Advisory

Brief the decision-makers. Briefings, workshops, and strategy sessions that bring leadership up to speed without the hype.

4

Capacity Building and Workshops

Mission-grade engagements. AI & Quantum readiness for agencies across 16 sectors, R&D and defense work.

5

Corporate & Investor Diligence

Risk diligence for the people writing the checks. Quantum exposure, PQC readiness, and cryptographic debt. One target or the whole book.

6

Domain-Specific Solutions

Shaped to your sector. We scope around your regulatory environment, data sensitivity, and risk profile, then build the program that fits.

We build alongside you

Already build your own tools? Bespoke software, analytics, and algorithms delivered inside your environment and to your standards, from a team that does original research in these fields.

Custom Build

Software, analytics, and algorithms built to your specification, scoped per engagement and delivered end to end.

Embedded Squad

Specialized AI, quantum, and PQC engineers working next to your team when in-house talent is the gap.

PoC to Production

Systems-integrator delivery that takes a proof of concept all the way into a running production system.

We work on the frontier

We don't just advise on the frontier, we work on it. ARO is an active research arm, and you work with the people writing the papers, not reselling them.

Original Research

ARO investigates how quantum-enabled computing can lower the cost and energy of AI data centers, alongside applied PQC and dual quantum-technology risk.

Peer-Reviewed to Operational

Findings are formalized in peer-reviewed venues, then transitioned into business operations rather than left on the page.

Collaborate Directly

Lab-informed engagements for clients who want advisory grounded in original research, plus CRADA and cooperative R&D vehicles for select partners.

Bring the quantum conversation to **your team**

Paid educational sessions that make quantum and post-quantum risk understandable to any audience. No prior engagement required, every session led by ArcQubit principals.

Keynotes

Keynotes and conference talks tuned to your audience's stakes.

Exec Workshops

Executive education workshops for senior leadership teams.

Board Briefings

Focused briefings that bring boards up to speed fast.

Executive Series

Multi-session series that build understanding over time.

Panels

Panels and breakout sessions for working forums.

University Engagement

Training and workshops for students.

Know what you're buying **before you buy it**

We run QuCode against a target's cryptographic estate, score readiness against the framework we use with enterprises, then translate findings into the language that moves a deal.

Valuation Impact

An independent read on quantum and cryptographic risk, expressed as the effect on what a company is actually worth.

Remediation Cost

What it takes to fix the exposure, sized so acquirers and boards can weigh it against the price on the table.

Time to Fix

Portfolio-wide sweeps flag the most exposed, most expensive targets. Delivered under NDA, on deal timelines.

Transparent, **tiered engagements**

Every engagement scopes to a Snapshot, Standard, or Comprehensive tier, with a Federal track where applicable.

Implementation & Delivery

Readiness Assessment, QuantumDrift Implementation, QuCode Integration, PQC Migration Advisory, Decision Intelligence Pilot Design.

Diagnostics & Assessment

AI and Quantum Risk Snapshot, PQC Discovery Sprint, AI and Quantum Readiness Score.

Executive & Board

Board Briefing, Executive Education Workshop, Keynote, Multi-Session Executive Series.

Federal & Dual-Use

Federal AI and Quantum Readiness, Critical Infrastructure (OT/ICS), Government R&D (SBIR/STTR, OTA, CRADA), Defense and National Security.

Custom, diligence and modifiers

Specialized tracks and engagement modifiers. Prices reflect published top-of-tier list rates; ask about Lighthouse Engagement pricing for reference clients.

Custom Engineering

Custom Software and Platform Build, Advanced Analytics and Algorithm Development, Embedded Engineering Squad, Proof of Concept to Production.

Corporate & Investor Diligence

Single-Target Diligence, Portfolio Sweep, Comprehensive Diligence.

Scope & Engagement Modifiers

Vertical Specialization Premium (10 to 20%), Lighthouse Engagement (up to 30% off), Accelerated and NDA deal timelines (on request).

START WITH ONE CONVERSATION

Start with one conversation

A two-week snapshot, a multi-year migration, a research partner, diligence on a target, or one sharp talk for your leadership team. The first step is the same: tell us where you are, and we will show you the bridge.
